How do I add to my Library results of a literature search that a Librarian sent me as an EndNote Library attached to an email?

1. Double-click the EndNote Library to open it
2. Highlight all the results in the Library
3. References -> Copy References To -> Choose Library
4. Navigate to the destination Library (e.g. Palliative Care.enl) and double-click it
5. Your destination Library will open and the copied records will appear in the database summary screen and identified in the left pane as ‘Copied References’
