How do I create only a bibliography of references, without a document citing them, from references in my EndNote Library?

There are several ways to copy references from your library and paste them in a Word document, this is the recommended method:

1. In EndNote toolbar, go to the **Output Style** list and **select the preferred style**.

2. Open your EndNote library and select the desired references in the Library window.

3. From the Edit menu, choose **Copy Formatted** (Ctrl + K) to copy the references to the Clipboard.

4. Open a document in your word processor, put the cursor where you would like the references to appear, and choose **Paste** (Ctrl + V) from the word processor’s Edit menu.

For other ways of creating independent bibliographies search the EndNote Help menu for “Independent Bibliographies”
