Can I insert in my document only references from a Group in my EndNote Library?

It is not possible to restrict your search to only those references contained in a Group you have created in your Library. The Group name is not retrievable in a search.

Tip: you can insert them all in your document and then move each in-text citation within the document as required. To do this highlight all references in the Group, then in your document at the EndNote toolbar click on the words “Insert Citation” and click “Insert Selected Citation(s)”.​
