How can I create in-text citations in my PowerPoint presentation?

PowerPoint does not support connections with the EndNote software so it is not possible to cite from your database and create a reference list as you would using Word. However, it is possible to create text in Word with citations from EndNote, and paste this formatted text into a PowerPoint slide. You will need to align the references so the text wraps around neatly.

Any changes you wish to make to the order of references or the style of references (e.g. numbered, Harvard etc.) should first be made in your Word document.
